PACSHealth achieves re-certification in ISO 9001:2015

SCOTTSDALE, Ariz./ August 14, 2023 --- PACSHealth, LLC, a developer of medical imaging informatics software, has today announced it has achieved International Standard Organization (ISO) 9001:2015 re-certification following an external audit.

"Successfully achieving re-certification of ISO 9001:2015 reflects our commitment to producing high-quality advanced medical imaging informatics software. It provides our customers and partners with the assurance that we adhere to the standard in every aspect of our operations," says PACSHealth's COO Mike Battin.

ISO 9001:2015 is a globally recognized quality management standard developed and published by the International Organization for Standardization (ISO). ISO certification involves extensive preparation, evaluation, and documentation of processes across all departments within the company. To achieve re-certification, rigorous and comprehensive company-wide audits were performed by a recognized certification agency, Intertek. The standard is based on several quality management principles, including having a strong customer focus, an outlined process-based approach, strong leadership, product development, and ongoing improvements to the overall quality management system.

PACSHealth's decision to continue to uphold ISO 9001:2015 certification demonstrates their commitment to continually improving their products and services. The advantages of using suppliers certified with ISO go far beyond consistent processes and good quality and will benefit both customers and PACSHealth.

The ISO 9001:2015 certification covers all quality management aspects within the company. PACSHealth's software products include PACSHealth®, VNAHealth®, DoseMonitor®, and DICOMeXtreme®.
